- [1]** If several evaluation units are mounted side by side in a control cabinet without air circulation (e.g. fan), a minimum distance of 10 mm must be maintained between the evaluation units. The distance enables heat from the evaluation unit to dissipate.
- [2]** After the operating voltage is switched on, the relay outputs are switched off and the door monitoring outputs are set LOW during the ready delay. For the visual indication of the delay, the green STATE LED flashes at a frequency of approx. 15 Hz.
- [3, 4, 5, 6]** Corresponds to the risk time according to EN 60947-5-3. This is the maximum switch-off delay for the safety outputs following removal of the actuator. In case of EMC interference in excess of the requirements in accordance with EN 60947-5-3, the switch-off delay can increase to max. 750 ms. After a brief actuation < 0.8 s, the switch-on delay can increase to max. 3 s if this is followed immediately by further actuation.
- [7]** In case of monitoring with feedback loop, the actuators must remain outside the operating distance, e.g. with a door open, until the feedback circuit is closed.
- [8]** The dwell time is the time that the actuator must be inside or outside the operating distance.
- [9]** Terminals not included
- [10]** Without taking into account the load currents on the monitoring outputs
- [11, 12, 13, 14]** This value is dependent on the number of switching cycles and the switching current.
- [15, 16, 17, 28, 29, 30, 31, 32, 33]** These values apply for the surface installation of the read head and the actuator.
- [18, 19, 20, 21]** On mounting in non-metallic environment
- [22, 23, 24]** These values apply for surface installation of the read head in steel.
- [25, 26, 27, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48]** These values apply for surface installation of the read head and the actuator.
- [34, 35, 36]** These values apply for the installation of the read head and the actuator in an aluminum profile 45 x 45 mm.
- [49, 50, 51, 53, 54, 55]** This value applies for the surface installation of the read head in metal and the non-metallic installation of the actuator.
- [52, 56]** These values apply for the surface installation of the read head in metal and the non-metallic installation of the actuator.
