Guard locking type

TP6 Open-circuit current principle, guard locking by applying voltage to the guard locking solenoid. Release by spring force.

Switching element

4120 Slow-action switching contact 1 NC \ominus (door unlock request contact) + 1 NC \ominus + 1 NO (solenoid monitoring contact)

Auxiliary shutdown feature

When actuated, positively driven NC contacts 21-22 are opened. The safety guard remains locked. The auxiliary shutdown feature must be sealed to prevent tampering (for example with sealing lacquer).

Door unlock request contact

When the actuator is in the locked state positively driven NC contact 21-22 is opened by pulling the safety guard (6 mm actuator stroke) as a result of which a signal is forwarded to the controlling PLC. Depending on the control concept, the safety guard can be unlocked automatically - when machine components which were still running have stopped.
