# Photoelectric slot sensor

# CE

# **Model Number**

## GL30-RT/30/40a/98a

Photoelectric slot sensor with 3-pin, M8 x 1 connector

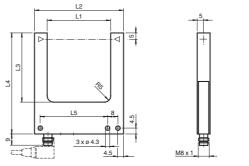

#### **Features**

- Optimized for the detection of small • parts
- High switching frequency ٠
- Multiple device installation possible, • no mutual interference (no cross-talk)
- Sensitivity adjuster and light/dark • switch as standard features of this series
- Visible red light
- Degree of protection IP67
- cULus approval •
- Diecast zinc housing, powder coated

### **Product information**

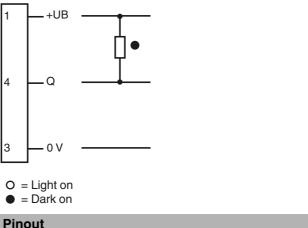

Photoelectric slot sensors offer vast installation benefits thanks to their housing design. When it comes to operation, these new generation devices boast features such as high resolution, high repeatability, automatic signal threshold adjustment, ambient light resistance, and detection of and/or light transmission through transparent objects. Cross-talk protection enables parallel installation of devices despite extremely high switching frequency. These characteristics guarantee reliable detection of small parts, from 0.3 mm, across the entire detection range, even in very fast moving applications.

# **Operating principle**

Photoelectric slot sensors are photoelectric sensors that operate according to the thru-beam sensor principle. The transmitter sends signals directly to the receiver. If an object breaks the light beam, the switching element function is triggered. The special U-shaped design means the transmitter and receiver can be accommodated in one housing, which ensures high resistance to vibrations. In contrast to standard thru-beam sensors, photoelectric slot sensors have the added advantage of not requiring complex electrical installation, as only one device needs to be connected. Also, adjustment of the optical axes is not necessary.
