SB4 Module 2E/165

Safety control unit module

Module for Evaluation unit SafeBox - series SB4

Features

- OSSD-R/E-stop-module
- Safety outputs OSSD, external status displays OSSD
- 2 sensor channels
- Operating mode can be selected by means of DIP switches
- Start/Restart disable
- Relay monitor
- Stop function Cat.0 or Cat.1 and central stop function Cat.0
- Time function
- Screw terminals or spring terminals

This module can only be operated within an evaluation device of the SafeBox SB4 type.

The SafeBox instruction manual should be observed.

Function

The OSSD-R/E stop module contains 2 OSSDs, the relay monitor, the restart connection and 2 connections for contact safety signals, (e.g. emergency off button). From position 3 on, this module may exist several times in the SafeBox and may perform different functions depending on the switch position.

The OSSDs are designed as potential free connection NO contacts. The module can be operated with or without restart interlock. Also, monitoring of the externally connected switching elements can be activated (relay monitor). The OSSD On or Off statuses are indicated via a short-circuit-proof pnp signal output. The restart output is used for indication of the start readiness status. In the case of an error, this output oscillates with 1 Hz.

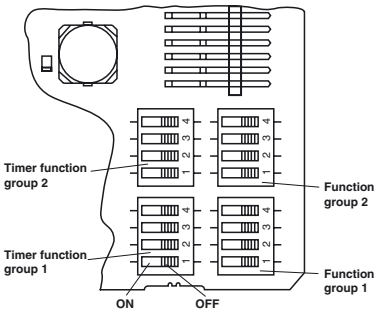
If the inputs remain unused of the OSSD-R/E stop module, a bridge is to be created, this also applies to the set Stop 1 function.

The module can work in stop function cat. 0 or cat.1 or it work in central emergency-stop function cat. 0.

Settings

The assembly contains 16 DIP switches for selecting the functions restart, relay monitor, central emergency-stop, OSSD assignment and time function. For selecting functions, 2 selector switches must always be actuated.

Position of the DIP switches



Switch	Position	Operation type
1 Group 1 and 2	OFF	Emergency-Stop 0 or 1, effective locally
	ON	Function as central Emergency-Stop
2 Group 1 and 2	OFF	Without restart interlock (restart, RI)
	ON	With restart interlock (restart, RI) for stop cat. 0
3 Group 1 and 2	OFF	Without relay monitor (RM)
	ON	With relay monitor (RM)
4 Group 1 and 2	OFF	Stop function cat. 0
	ON	Stop function cat. 1

Displays

The OSSD assembly has a red/green LED for indicating the OSSD on/off statuses, a yellow LED for the start-ready status and 2 LEDs for the sensor channels.

If there is an error on the OSSD assembly itself, only the displays on this assembly are flashing.

Display	LED	Meaning
OSSD	red	OSSD outputs switched off
	green	OSSD outputs switched on
RI	yellow	Continuous light: protected area free, OSSD off, start readiness, actuate restart push button
		Flashing (5 Hz): error on the card, in the switch group or system error
I1, I2	yellow	Continuous light: sensor channel closed
		Flashing (5 Hz). sensor channel error
