

# Model number

INX360D-F99-I2E2-7M

# Features

- E1-Type approval
- Measuring range 0 ... 360°
- Analog output 4 mA ... 20 mA
- Evaluation limits can be taught-in
- 2 programmable switch outputs
- High shock resistance
- Increased noise immunity 100 V/m

# **Electrical connection**

Standard symbol/Connection:

# Dimensions

### **Sensor Orientation**

In the default setting the zero position of the sensor is reached, when the electrical connection faces straight upwards.

# **X** Orientation

## Mounting of the sensor

Sensors from the -F99 series consist of a sensor module and accompanying cast aluminum housing. Select a vertical surface with minimum dimensions of 70 mm x 50 mm to mount the sensor. Mount the sensor as follows:

- 1. Loosen the central screw under the sensor connection.
- Slide back the clamping element until you are able to remove the sensor module from the housing. Remove the sensor module from the housing 2
- 3.
- Position the housing at the required mounting location and secure using four countersunk screws. Make sure that the heads of the screws do not protrude. 4.
- Place the sensor module in the housing.
   Slide the clamping element flush into the housing. Check that the sensor element is seated correctly.
   Finally tighten the central screw.
   The sensor is now mounted correctly.

# LED display

USA: +1 330 486 0001 fa-info@us.pepperl-fuchs.com

Displays dependent on the operating state	LED green: Power	LED yellow out 1	LED yellow out 2
Teach-in of switching points (output S1):	off	flashes	off
Teach-in of switching points (output S2):	off	off	flashes
Activate teach-in mode for analog limits:	off	flashes	flashes
Teach-in of analog limits	off	flashes	off
Normal operation	on	switching- state	switching- state
Reset to factory settings:			
2 s 10 s	off	flashes	flashes
> 10 s end of reset process	flashes	off	off
Followed by normal operation			
Undervoltage	flashes	off	off

#### Axis definition

The definition of the X-axis is shown on the sensor housing by means of an imprinted and labeled double arrow. The figure shows the clockwise direction of rotation

### Teach-in of switching points (output S1)

- Press key T1 > 2 s (see LED display) 1.
- 2
- 3
- Move sensor to switching position 1 Press key T1 briefly. LED "out 1" lights for 1.5 s as confirmation. Switching point 1 has been taught Move sensor to switching position 2 Press key T1 briefly. LED "out 1" lights for 1.5 s as confirmation. Switching point 2 has been taught 4. 5
- 6. Sensor returns to normal operation (see LED display)

The NC (active output state) is always defined in the range from the 1st configured position to 2<sup>nd</sup> configured position. As an example : Case #1: configure position #1 at +45degree, configure position #2 at +90 degree; NC is

from +45 ' +90 in the CW direction Case #2: configure position #1 at +90degree ; configure position #2 at +45 degree; NC is from +90 ' +45 in the CW direction

## Teach-in of switching points (output S2)

Similar to the process for "Teach-in of switching points (output S1)", but with key T2 instead of key T1.

### Teach-in of analog limits

- Activate the teach-in mode for the analog limits by simultaneously pressing keys T1 and T2 until the green LED is extinguished and the two yellow LEDs flash. 1. Then release the keys
- 2
- 3.
- Press key T1 > for 2 s (see LED display) Move the sensor into the position of minimum evaluation limit Press key T1 briefly. LED "out 1" lights for 1.5 s as confirmation. The minimum evaluation limit has been taught. In this position the analog output will provide its 4. minimum output value.
- 5. Move the sensor into the position of maximum evaluation limit
- 6 Press key T1 briefly. LED "out 1" lights for 1.5 s as confirmation. The maximum evaluation limit has been taught. In this position the analog output will provide its maximum output value
- 7. Sensor returns to normal operation (see LED display)
  - If the sensor inclination exceeds one of the analog limits, the last value of the analog output is retained.

## Resetting the sensor to factory settings

- 1. Press keys T1 and T2 > 10 s (see LED display)
- 2. The sensor has been reset when the green LED "Power" lights again after approx. 10 s.

#### Undervoltage detection

If the supply voltage falls below a value of approx. 7 V, all outputs and yellow LEDs are deactivated. The green "power" LED flashes rapidly. If the supply voltage falls below a value of approx. 8 V, the sensor continues with normal operation.
