Notes

Mounting

In order to ensure proper heat dissipation the power supply has to be mounted vertically in such a way, that the input terminals (L1/L2/L3/PE) are located at the upper side and the output terminals (+/-) at the lower side of the front panel.

A minimum clearance of 100 mm beneath and above and 30 mm to the right and left of the power supply must be provided.

The inlet air temperature beneath the unit must not exceed the values specified in this instruction.

The two plus respectively the two minus output connections are internally tied together.

Function

The slim-line power pack provides a direct voltage in an even larger adjustable output voltage range of 23 ... 30 V DC, while optimizing the space available in the control cabinet.

The current limit can be adjusted via an internal potentiometer. In addition to an LED showing the operational status (power), a red LED (overload) signals overloads on the output side.

The device features a convenient DIN rail fastening.
