

Model Number

LGS8

Light grid

with fixed cable with 4-pin, M12 x 1 connector, and fixed cable with 8-pin, M12 x 1, connector

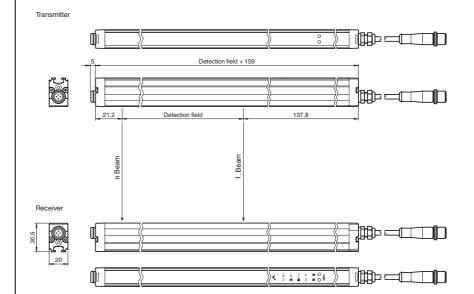

Features

- Automation light grid
- Optical resolution 8 mm
- Super-fast object detection, even with 3-way beam crossover
- Software-free adjustment of height monitoring
- Object identification using integrated object recognition
- IO-link interface for service and process data
- Optional temperature range to -30 °C

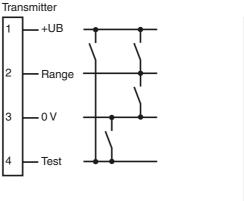

Product information

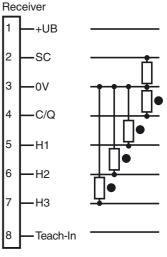

The LGS automation light grid series detects objects ranging in size from small to large. The very slender light grids have a modular design and come in different beam spacings and field heights. All signal evaluation takes place inside the unit. The lightweight systems can be integrated in their surroundings in a well-designed configuration, which means that machines and plants in temperature ranges between -30 °C ... +60 °C can be designed more compactly.

Accessories

OMH-LGS-01

Attachment aid for light grid series LGS/ LGM

OMH-SLCT-06

Swivel Bracket

V19-G-EMV-BK0,3M-PVC-V19-G

Double-ended cordset, M12 to M12, with EMC filter, 8-pin, PVC cable

OMH-SLCT-01

Quick clamp and adjustment system

OMH-SLCT-03

Mounting bracket including adjustment

OMH-SLCT-04

Mounting bracket including adjustment (with loose bearing)

OMH-SLCT-05

Mounting bracket including adjustment

AA SLCT-01

Profile alignment aid; simplified alignment of the SLCS and SLCT safety light curtains

V1-G-BK2M-PUR-U

Female cordset, M12, 4-pin, PUR cable

V1-G-BK5M-PUR-U

Female cordset, M12, 4-pin, PUR cable

V1-G-BK10M-PUR-U

Female cordset, M12, 4-pin, PUR cable

V1-G-BK15M-PUR-U

Female cordset, M12, 4-pin, PUR cable

V19-G-BK10M-PUR-IEC

Female cordset, M12, 8-pin, PUR-cable

V19-G-BK2M-PUR-IEC

Female cordset, M12, 8-pin, PUR-cable

V19-G-BK5M-PUR-IEC

Female cordset, M12, 8-pin, PUR-cable

V19-G-BK2M-PUR-U-V1-G

Connection cable, M12 to M12, 8/4-pin, PUR cable

IO-Link-Master02-USB

IO-Link master, supply via USB port or separate power supply, LED indicators, M12 plug for sensor connection

IO-Link-Master-USB DTM

Communication DTM for use of IO-Link-Master

PACTware 4.1

FDT Framework

IODD Interpreter DTM

Software for the integration of IODDs in a frame application (e. g. PACTware)

LGS IODD

IODD for communication with LGS-IO-Link sensors

V1-G-BK0,6M-PUR-U-V1-G-LGS25T

Cordset, LGS25 light grids to ICE modules/WIS 2, M12 to M12, PUR cable,

PEPPERL+FUCHS

Connection Emitter: 200 mm connecting cable with 4-pin, M12x1 connector

Receiver: 200 mm connecting cable with 8-pin, M12 x 1 connector Cable cross section min. 0.25 $\,\mathrm{mm}^2$

Max. cable length 30 m

Material

Housing extruded aluminum section. Silver anodized

Optical face Plastic pane, Polycarbonate

Mass see Table 1, max. 1200 g (per profile)

Compliance with standards and

directives

Directive conformity

EN 60947-5-2:2007 EMC Directive 2004/108/EC

Standard conformity

EN 60947-5-2:2007 Product standard IEC 60947-5-2:2007

Approvals and certificates

III (IEC 61140) Protection class **UL** approval cULus Listed

CCC approval CCC approval / marking not required for products rated ≤36 V

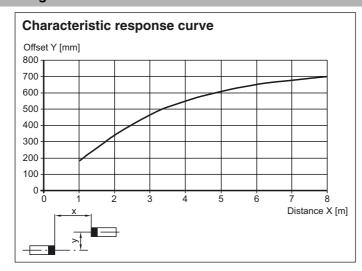

Operating principle

The light grid consists of a transmitter and a receiver, between which is the area to be monitored. The switch command is initiated by the entry or existence of a body/object in the monito-

The modular system design supports a wide range of distances for the lines of light. Optimum implementation of the LGS series light grids for specific application requirements is thus pos-

The system also has 3 switch outputs for height checking. The system is programmed using the integrated touch field or the IO-Link interface.

Curves/Diagrams

Design and function

Safety information

The device must only be operated with Safety Extra Low Voltage (SELV) with safe electrical disconnection. Intervention and repairs must only be carried out by your suppliers.

The system must be serviced and checked regularly.

A clean, soft cloth can be used for cleaning. Aggressive, abrasive cleaning agents that damage the surface must be avoided. The device must not be subjected to hard knocks or vibration.

Commissioning

Prerequisites

- The transmitter and receiver must be installed and aligned correctly.
- The electrical connection must be established according to the connection diagram.
- The signal output must respond to object detection.
- If at least one light beam is interrupted, the output remains active as long as the object is detected.

Fault location

- Measure operating voltage
- Check the cabling.
- Check the transmitter and receiver for dirt and clean if necessary.

Function displays

Behind the optics cover on the connection side of the profiles there is a green Power ON operating indicator LED and a yellow status display LED.

Transmitter

| Function | Diagnostic description |
|---|--|
| Green operating indicator LED lights up statically | Power-On |
| Green operating indicator LED is dark and yellow status indicator flashes | Power save mode |
| Yellow status indicator LED is dark | Transmitter with low transmitting power |
| Yellow status indicator LED lights up statically | Transmitter with high transmitting power |
| Yellow status indicator LED flashes quickly (approx. 8 Hz) | Error condition |
| Yellow status indicator LED light changes for short time | Test input is activated |

Receiver

| Function | Diagnostic description |
|---|---|
| Green operating indicator LED lights up statically | Power-On |
| Green operating indicator LED is dark | Power save mode |
| Green operating indicator LED flashes with brief interruption | IO-Link mode active, parameterisation only possible via IO-Link |
| Green operating indicator LED flashes (4 Hz) | Error condition: Short circuit at the outputs |
| Yellow status indicator LED lights up statically | Detection field interrupted |
| Yellow status indicator LED is dark | Detection field is enabled. |
| Yellow status indicator LED flashes (approx. 4 Hz) | Insufficient function reserve |
| Yellow status indicator LED flashes quickly (approx. 8 Hz) | Error condition: Incorrect signal measurement |

Resolution and beam clearance

The mechanical beam clearance determines the smallest detectable object size. Crossing the light beams increases the resolution of the light grid.

The devices are delivered without programmed height checking. The beam is crossed three times.

Resolution of the crossed beam arrangement

If three-way crossing of the beams is programmed, the resolution increases. For a three-way crossing, this means that the increased resolution is offered after 25% of the transmitter range or receiver range. It must therefore be ensured that all objects pass transmitters or receivers with this clearance.
