5	180.8	

Model Number

onal module slots for functional enhancement

Safety control unit of series SB4

Features

- ٠ Evaluation device for safety thrubeam sensors SLA12 and SLA29 and for 2 channel safety devices (emergency off)
- Self-monitoring (type 4 according to IEC/EN 61496-1)
- Operating mode can be selected by • means of DIP switches
- 7-segment diagnostic display
- displays OSSD

Function			

The operating instructions that accompany the unit must be observed during planning, installation and operation.

The SB4 evaluation system is a type 4 (EN 61496-1 or IEC 61496-1) and category 4 (EN 954-1) AOPD. This system has also been designed and tested in accordance with IEC 61508. The system meets the requirements of SIL3.

At most 4 safety thru-beam sensors can be connected to the control interface in the default setting. Other contact-equipped safety devices can be connected instead of the thru-beam sensors.

The control interface has empty slots. They are used for individual function extensions with SB4 modules.

The following SB4 modules can be employed:

- SB4 modules 4C: SB4 modules 4C in various versions.
- SB4 module for connecting four 2-wire sensors
- SB4 modules 4X: SB4 modules 4X in various versions.
 - SB4 module for connecting 3-wire sensors and safety devices with semiconductor switching outputs
- SB4 modules 6C: SB4 modules 6C in various versions.

SB4 module for connecting six 2-wire sensors

- SB4 modules 2E: SB4 modules 2E in various versions.
 Additional 2 OSSDs, relay monitoring, restart connection and 2 connections for contact-equipped safety sig
 - nals (e.g. emergency off switch), timer functions
- SB4 modules 4M:SB4 modules 4M in various versions. Muting module for connecting up to 4 muting sensors

Operating modes

The startup/restart interlock is activated by default.

All groups feature DIP switches to select the functions. Two switches must always be actuated in order to select a function.

Switches on the first group:

Switch	Position	Operating mode
1 and 3	OFF	Without startup/restart interlock (restart, RI)
	ON	With startup/restart interlock (restart, RI)
2 and 4	OFF	Without relay monitor (RM)
	ON	With relay monitor (RM)

Switches on the second group:

Switch	Position	Operating mode
1 and 3	OFF	No complementary evaluation
	ON	Complementary evaluation active
2 and 4	OFF	No simultaneous evaluation
	ON	Simultaneous evaluation active

Indicators

The OSSD-R/supply module in position 1 features a red/green LED to signal the OSSD off/on statuses, a yellow LED to indicate the "Ready for startup" status and a 7-segment display for system diagnostics.

The 7-segment display signals the system status and error codes.
