

LS670-DA-EN/F2

Optical data coupler

Features

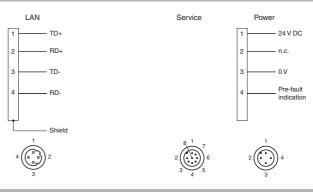

- Independent of Ethernet protocol
- Plug connection for fast mounting •
- No parameterization ٠
- Line indicator for signal strength •

Product information

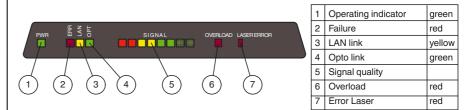

The optical data coupler connects Ethernet modules to remote modules. These can move along a line of sight toward each other. The devices are ideal for conditions in automated storage and retrieval systems.

The data transfer takes place with an average transfer rate of 7.5 MBit/s full duplex. The data rate remains constant regardless of distance. Data packets or telegrams are not saved but rather immediately transferred.

Function

The LS670-DA-EN is a device for serial data transfer in Ethernet systems. One F1 and one F2 device is needed for each data transfer link.

Data Transfer

Data is transferred in both directions by means of modulated light. The information at the input interface is modulated on the carrier signal. The information is then demodulated and issued to the output interface within the receiver. The LS670 features a special "OVERLOAD" display. This display indicates that the transmission capacity of the 8 KB data buffer has been exceeded by the current data volume. In this case, the non-transferable Ethernet telegrams are discarded.

Function Displays/Signal Strength

A red alignment LED, which can be seen from a long way off, is located on the front of the device to serve as an alignment aid. As soon as a receiver detects the transmitted light of the device opposite it, the flashing frequency of the alignment aid decreases. If the light goes out, this indicates that the devices are optimally aligned and sufficient signal strength is available. For fine adjustment, the optical data coupler features a bar graph display (signal display) for optimum alignment.

PWR 변 것 등 SIGNAL OVERLOAD LASER ERROR			
State	weak signal	sufficient signal strength	signal with function reserve
Transmission	blocked	released	transmission with function reserve
Alignment-LED	fast flashing	slow flashing	off
Signal-indicator	red area	yellow area (at least one LED)	green area

Mounting

The device is mounted using appropriate accessories, e.g., OMH-LS610-01 for wall mounting.

The x-y adjuster is delivered preassembled. It is fixed in the required beam direction (±90° rotation possible) on the mounting bracket.

Laser notice laser class 1M

- The irradiation can lead to irritation especially in a dark environment. Do not point at people!
- Caution: visible and invisible laser radiation, do not observe laser light with optical instruments such as magnifying glasses, microscopes, telescopes or binoculars!
- · Maintenance and repairs should only be carried out by authorized service personnel!
- Attach the device so that the warning is clearly visible and readable.
- Caution: use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiaton exposure.
