General specifications	
Function principle	limit detection Maximum or minimum detection in tanks or pipelines containing all types of liquids including use in explosion hazardous areas. Particularly suited to very aggressive liquids thanks to high degree of corrosion protection.
Measuring method	The forks of the sensors vibrate at their intrinsic frequency. This frequency is reduced when covered with liquid. The change in frequency then activates the limit switch.
Construction type	device with extension tube

Ambient temperature

Permissible ambient temperature T_1 at the housing depends on the product temperature T_2 in the vessel:

* additional temperature range for sensors with a temperature separator or pressure-tight bushing

Switch point

Switch point ► on the sensor depend on the mounting position, with reference to water, density 1 g/cm³, 23 °C, p_e 0 bar.

Note:

The switch points of the Vibracon LVL-M2C are at other positions to those of the previous versions LVL1, LVL2.

Electrical connection

Electronic insert FEL50A (PA)

Two-wire connection for power supply and data transfer for connecting to PROFIBUS PA

Additional functions:

- Digital communication enables the representation, reading and editing of the following parameters: fork frequency, switch-on frequency, switch-off frequency, switch-on time and switch-off time, status, measured value, density switch.
- Matrix locking possible.
- Switch to WHG mode possible (WHG approval).
- You can also visit www.profibus.com for more information.

Electronic insert FEL51 (AC)

Two-wire AC connection

Always connect in series with a load!

Check the following:

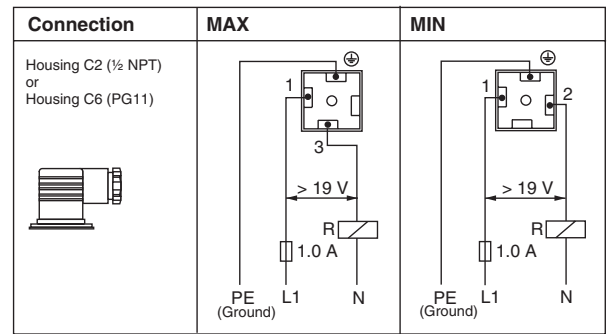

- the residual current in blocked state (up to 3.8 mA)
- that for low voltage
 - The voltage drop across the load is such that the minimum terminal voltage at the electronic insert (19 V) when blocked is not undershot.
 - The voltage drop across the electronics when switched through is observed (up to 12 V).
- that a relay cannot de-energise with holding power below 3.8 mA
If this is the case, a resistor should be connected parallel to the relay (RC module available on request).
- When selecting the relay, pay attention to the holding power/rated power (see connectable load).
