Features

- 2-channel isolated barrier
- 24 V DC supply (bus or loop powered)
- Output 40 mA at 12 V DC, 55 mA current limit
- Contact or logic control input
- Entity parameter I_o/I_{sc} = 110 mA
- Line fault detection (LFD)
- Up to SIL 2 acc. to IEC 61508 (bus powered)
- Up to SIL 3 acc. to IEC 61508 (loop powered)

Function

This isolated barrier is used for intrinsic safety applications.

It supplies power to solenoids, LEDs, and audible alarms, located in a hazardous area.

It is controlled with a loop-powered control signal, switch contact, transistor, or logic signal.

At full load, 12 V at 40 mA (with 55 mA current limit) is available for the hazardous area application.

An alternative low current output is available for driving a single LED without installing an external current limiting resistor.

Line fault detection of the field circuit is indicated by a red LED and an output on the fault bus.

This device mounts on a HiD Termination Board.

Switches for channel I and II	S6
Function	
Filter disable	OFF
Filter enable	ON

Factory settings: bus powered, control input: contact, line fault detection enabled, filter disabled

To reduce the power consumption of the device, we recommend to set the DIP switches of channel II in the OFF condition, when channel II is not used (single channel application).

The new device HiD2872 will replace the devices HiD2871, HiD2872, HiD2873 and HiD2874. The new device HiD2872 has the same device functions as the four previous devices. If you want to use the specific device functions of the previous devices, you must configure the new device HiD2872. See following table.

Configure the device in the following way:

- Push the red Quick Lok Bars on each side of the device in the upper position.
- Remove the device from Termination Board.
- Set the DIP switches according to the figure.

The pins for this device are trimmed to polarize it according to its safety parameter. Do not change! For further information see system description.

When both channels of the solenoid driver are operated in normally energised condition, either the load must be reduced or increased spacing/ventilation be applied to reduce the temperature rise. Contact Pepperl+Fuchs for guidance.
