Features

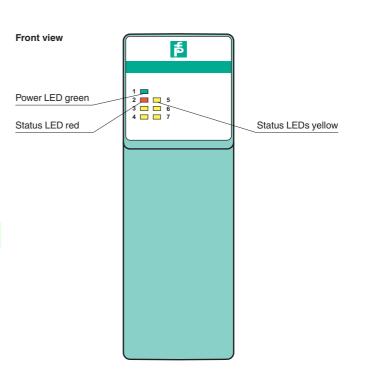

- Interface between the I/O modules and the PCS/PLC
- · Com unit for 80 analog or 184 digital channels
- Communication via MODBUS TCP
- Mounting in Zone 2, Class I/Div.2 or in the safe area
- · HART communication via MODBUS TCP or service bus
- Configuration via FDT 1.2 DTM
- · Non-volatile memory for configuration and parameter settings
- Self configuration in redundant systems
- · Permanently self-monitoring
- · Outputs drive to safe state in case of failures
- · Module can be exchanged under voltage

Function

The MODBUS TCP com unit forms the interface between the I/O modules on the backplane and the process control system.

It supports all single width and dual width I/O modules. Thereby signals from NAMUR sensors, mechanical contacts, high-power solenoid drivers, power relays, sounders, and alarm LEDs are transported to the higher-level bus system.

The com unit can be easily configured via DTM and supports redundancy as well as HART.

General information	
System information	The module has to be mounted in appropriate backplanes (LB9***) in Zone 2 or outside hazardous areas. Here, observe the corresponding declaration of conformity. For use in hazardous areas (e. g. Zone 2, Zone 22 or Div. 2) the module must be installed in an appropriate enclosure.
Supplementary information	EC-Type Examination Certificate, Statement of Conformity, Declaration of Conformity, Attestation of Conformity and instructions have to be observed where applicable. For information see www.pepperl- fuchs.com.
