### **Features**

- Interface between the I/O modules and the PCS/PLC
- · Com unit for 80 analog or 184 digital channels
- · Communication via PROFIBUS DP
- Module can be exchanged under voltage (hot swap)
- HART communication via PROFIBUS DP V1 or service bus
- Installation in suitable enclosures in Zone 1
- Configuration via FDT 1.2 DTM
- · Configuration in run (CiR) for any PCS
- Non-volatile memory for configuration and parameter settings
- · Self configuration in redundant systems
- · Permanently self-monitoring
- · Outputs drive to safe state in case of failures

### **Function**

The PROFIBUS com unit forms the interface between the I/O modules on the backplane and the process control system.

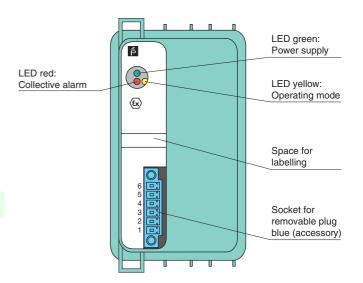

It supports all single width and dual width I/O modules. Thereby signals from NAMUR sensors, mechanical contacts, high-power solenoid drivers, power relays, sounders, and alarm LEDs are transported to the higher-level bus system.

The com unit can be easily configured via DTM and supports redundancy as well as HART.

Configuration in Run (CiR) enables configuration of a running system without a PROFIBUS restart, even in non-redundant systems.

General information	
System information	The module has to be mounted in appropriate backplanes (FB92**) in Zone 1, 2, or outside hazardous areas. Observe the corresponding EC-type examination certificate.
Supplementary information	EC-Type Examination Certificate, Statement of Conformity, Declaration of Conformity, Attestation of Conformity and instructions have to be observed where applicable. For information see www.pepperlfuchs.com.

## **Versions**

Bus couplers are available with different firmware versions. The type code extension \* designates the firmware version.
