| - notice | Actuating distance up to 50 mm depending on actuating magnet and version |
|  | The specifications with regard to the switching distances apply to the actuation of the individually mounted devices without ferromagnetic influence. Any change of the distance, positive either negative, is possible due to ferromagnetic interference. When multiple actuating magnets are used, the mutual interference must be observed. |
| Type of actuation | Magnet |

| Resistance to vibration | $10 \ldots 55 \mathrm{HZ}$, Amplitude 1 mm |
| Bounce duration | 0,15 |
| Latching (Y/N) | No |
| bias magnet (Y/N) | Yes |
| Actuating speed | 18 |
| Switching point accuracy | $\pm 0,25 \mathrm{~mm}$ |

## notice

The opening and closing functions depend on the direction of actuation, the actuating magnets and the polarity of the actuating magnets.
When the switches and actuators come together, the colours must coincide: Red (S) to red (S) and green (N) to green (N). This does not apply to the bistable contact.

The switch is to be mounted on iron with a non-magnetic layer of at least 20 mm .

## Included in delivery

Actuators must be ordered separately.
