The PFH value is applicable for the combinations listed in the table for contact load (K) (current through enabling paths) and switching cycle number (n-op/y).

In case of 365 operating days per year and a 24-hour operation, this results in the specified switching cycle times (t-cycle) for the relay contacts.

Diverging applications on request.

## notice - Wiring example

To secure 6 guard doors up to PL d and Category 3 Monitoring 6 guard door(s), each with a magnetic safety sensor of the BNS range Start button (S) with edge detection The feedback circuit monitors the position of the contactors K3 and K4. Automatic start: The automatic start is programmed by connecting the feedback circuit to the terminals X1/X3. If the feedback circuit is not required, establish a bridge The wiring diagram is shown with guard doors closed and in de-energised condition.
