notice

Inductive loads (e.g. contactors, relays, etc.) are to be suppressed by means of a suitable circuit.

notice - Wiring example

Input level: the example shows a 2-channel control of an Emergency Stop command device (level 1) with external reset button (R), and guard door monitoring (level 2) with feedback circuit (H2).

The control recognises cross-short, cable break and earth leakages in the monitoring circuit.

Relay outputs: Suitable for 2 channel control, for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.

Automatic start:

Level 1: the automatic start is programmed by connecting the feedback circuit to the terminals X1/+24VDC.

Level 2: the automatic start is programmed by connecting the feedback circuit to the terminals X2/+24VDC.

If the feedback circuit is not required, establish a bridge

1 NC contact each time communicates the status of level 1 and level 2

The wiring diagram is shown with guard doors closed and in de-energised condition.
