- Increased switching distance
- Innovative ASIC circuit technology
- Minimal mounting clearance thanks to wenglor weproTec
- Sensor head as sensing face

Inductive Sensors with increased switching distances are distinguished by rugged design, easy installation and reliable measured values. The large range makes additional types of sensor superfluous because they can also be used to implement special applications. In addition to error-free operation of several sensors in a very small space, the new generation also provides the possibility of detecting system errors before it's too late thanks to ASIC und wenglor weproTec.
