MLWL105 LASER

Part Number

- Optimized profile quality thanks to HDR function
- Precise measuring range resolution X (> 2000 measuring points)
- Up to 12 million measuring points per second

2D/3D Profile Sensors project a laser line onto the object to be detected and generate an accurate, linearized height profile with an internal camera which is set up at a triangulation angle. Thanks to its uniform, open interface, the weCat3D series can be incorporated by means of the DLL program library or the GigE Vision standard without an additional control unit. Alternatively, wenglor offers its own software packages for implementing your application.

## **Technical Data**

| rechnical Data   |                                    |
|--|------------------------------------|
| Optical Data   |                                    |
| Working range Z  | 6001400 mm                         |
| Measuring range Z                                      | 800 mm                             |
| Measuring range X                                      | 450720 mm                          |
| Linearity Deviation                                    | 200 μm                             |
| Resolution Z   | 2867 <i>μ</i> m                    |
| Resolution X   | 235361 μm                          |
| Light Source   | Laser (red)                        |
| Wavelength   | 660 nm                             |
| Service Life (T = +25 °C)                              | 20000 h                            |
| Laser Class (EN 60825-1)                               | 1M                                 |
| Max. Ambient Light                                     | 5000 Lux                           |
