

# Safety Switch with Lock Function

## Electromechanic, Power to Lock Principle

### S2FP104

Part Number

- Locking force of 1000 N
- Performance Level: Cat. 4 PL e
- Power to lock principle

The electromechanical safety switch with lock function is distinguished by a high locking force of 1000 N. As a result, only one safety switch with lock function is required in order to fulfill a safety level of category 4 PL e (EN ISO 13849-1). The safety level, as well as reaction time and risk time, remain unchanged when connected in series. Extensive diagnosis functions enhance system availability and simplify installation and maintenance. The unique star handle operating concept is especially well-suited for rotary and sliding doors. Thanks to RFID encoding and an actuator with teach-in function, the safety switch with lock function demonstrates high levels of protection against manipulation.
